

anaptis Mobile Logistics

Mobile data acquisition in the warehouse with Dynamics 365 Business Central

ANAPTIS GMBH

Medium-sized companies from a wide variety of industries use our software to better manage their resources and processes and make them more efficient.

In addition to the standard ERP solution Microsoft Dynamics 365 Business Central (formerly Dynamics NAV/Navision), we also implement industry-specific enhancements - among others in cooperation with our partners.

YOUR CHALLENGE WITHOUT THE ADD-ON

Can you really rely on your data in the system? How many products are currently in stock and where are they located? Can your employees really operate the system without errors or do mistakes happen frequently?

Either: Subsequent data entry "from the desk"

If you are not yet using our anaptis Mobile Logistics add-on and also do not yet have any mobile devices in use, delays result from subsequent data entry in Dynamics 365 Business Central (formerly Dynamics NAV/Navision) "from the desk". After all, data is not captured in real-time at the point of action in the system.

Stress leads to incorrect entries, which are fatal for both the warehouse and the accounting department. In addition, relevant documents must be kept for at least ten years, resulting in large piles of files.

Or: Work with mobile touch devices without touch optimization and scan function

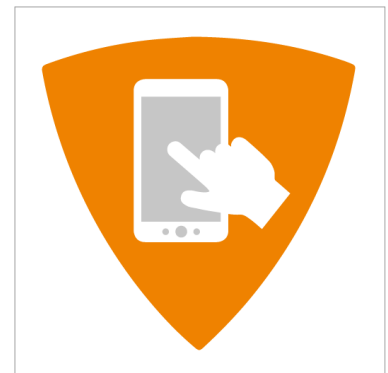

If you are already working with mobile devices but not yet with our app, you cannot yet fully exploit the potential of mobile devices. After all, you are only calling up the browser view of Dynamics 365 Business Central.

This results in the following problems:

1. no touch optimization or suitability for warehouse activities (e.g. picking)
2. no scan function

OUR SOLUTION: ANAPTIS MOBILE LOGISTICS

Our Microsoft-certified anaptis Mobile Logistics add-on does not change the Microsoft 365 Business Central system standard. Instead, we supplement the system standard. In this way, the processes (goods receipt, putaway, stock transfer, picking, goods issue, receipts and issues, blocking of storage bins) can be recorded in a user-friendly manner in Microsoft Dynamics 365 Business Central directly when they are created.

Our add-on anaptis Mobile Logistics enables mobile data acquisition in Dynamics 365 Business Central (formerly Dynamics NAV/Navision) via mobile devices in real time. Mobile terminals include, for example: MDE, barcode or radio scanners, smartphones, tablets, notebooks, touch screens or forklift terminals. A touch-optimized application as well as a scan function help you to work productively.

In this way, sources of error are minimized (among other things, through a plausibility check) and processes are optimized. The display on mobile devices is clear and self-explanatory, so that your employees can easily get used to it. The modular structure of the application also makes it possible to customize it according to your needs. In addition, extensions can also be added easily afterwards.

COMPARISON: ANAPTIS MOBILE LOGISTICS VS. SYSTEM STANDARD

<i>Criterion</i>	<i>Standard</i>	<i>anaptis Mobile Logistics</i>
<i>Recording of item movements in the warehouse</i>	✓	✓
<i>Scanning of item movements in the warehouse</i>	-	✓
<i>Working with batch and serial numbers</i>	✓	✓
<i>Scanning batch and serial numbers</i>	-	✓
<i>Simple and intuitive handling</i>	-	✓
<i>Optimized touch input</i>	-	✓

ADVANTAGES OF ANAPTIS MOBILE LOGISTICS

Error prevention

Real-time data
overview
